

BARRY ASMUS PH.D.

IDEAS SPOKEN

WHO IS DR. BARRY ASMUS?

Dr. Barry Asmus has been named by *USA Today* as one of the five most requested speakers in the United States. As a Senior Economist for the prestigious National Center for Policy Analysis (NCPA), Dr. Asmus does more than just speak on policy, he is actively involved in its implementation both in the U.S. and abroad. On recent trips to Romania, Albania, China and Peru, Dr. Asmus has encouraged government leaders to pass free-market, low tax, protected property rights and free trade policies. He is a recognized thinker who delivers his ideas in an enthusiastic and energy filled presentation.

SPEECH TOPICS

America’s Economic Future

Globalization: International Prosperity and its Impact on America

Healing Health Care in America

Powering America’s Energy Future

America's Economic Future

The United States is fighting to come back from the deepest recession since the Great Depression. What economic policies would be most helpful to create jobs and economic growth? Can America compete globally with our current tax system, two trillion dollars of annual government regulation and costly new health care policy? What are the inflationary implications of our current spending levels, monetary easing and national indebtedness? Dr. Asmus will give his views on America's three unstoppable trends and outlook for the future.

Globalization: International Prosperity and its Impact on America

As the current world economy speeds from \$65 trillion of world GDP in 2011 to \$130 trillion in 2030, will America hold on to its number one position? Will the world's emerging countries rush to urbanization provide an opportunity for American expertise and trade? Dr. Asmus' twenty-five years experience of tracking over a hundred of the world's economies in an economic freedom index helps clients identify both growth and opportunity prospects.

Healing Health Care in America

As the national health care countries of the world move away from a single payer system, why is the U.S. moving towards it? When does NHC work for a country and when does it not? What five steps must America take to empower medical consumers and force health care providers to compete? Competition works in every other sector of the economy, why not health care? The National Center for Policy Analysis is widely recognized for its health care expertise on affordable, portable and transparent patient controlled alternatives.

Powering America's Energy Future

North America could become the largest energy producer and exporter in the world. The four largest gas fields in the world recently discovered in the U.S. along with its vast coal reserves are literal game changers. This is the time to increase domestic energy of all forms? Energy production will be a focal point of the next election and could be an exciting bright spot in America's immediate future.
